

Mandatory confirmation gates

	combined capability	PASS	high-m/high-g beats every other quadrant with a CI above zero
	controls	PASS	isolation exact, negative controls detected, no saturation or leak
	cross g to M	PASS	cross effect equivalent to zero and ratio bounded
	cross m to N	PASS	cross effect equivalent to zero and ratio bounded
	degree profile equivalence g	PASS	every member of the family is equivalent to zero after correction
	degree profile equivalence m	PASS	every member of the family is equivalent to zero after correction
	memory main effect	PASS	main effect exceeds the threshold with a CI above zero
	nonlinear main effect	PASS	main effect exceeds the threshold with a CI above zero
